GRADUATION

- **Systems Analysis and Development - UniRitter**
- **Advanced English (fluent)** - <https://www.efset.org/cert/2SGYf7>
- **SCRUM Fundamentals Certified** - VMedu, certificate ID: 1058008

EXPERIENCE

With over three years of experience studying technology, I have been combining university studies with independent learning in programming. While programming remains my primary focus, I am also deeply interested in emerging fields like artificial intelligence and their potential to reshape industries. This dual focus helps me stay updated with cutting-edge trends and broadens my ability to contribute meaningfully to various challenges.

I have completed several projects involving the development of systems that solve diverse problems, gaining hands-on experience with JavaScript, PHP, and SQL. My ongoing learning includes modern technologies such as React and Node.js, as well as exploring AI tools and frameworks. I aim to integrate AI-driven approaches into my work to create smarter, more efficient solutions.

Beyond technology, I have a strong interest in international relations and global affairs, which enhances my understanding of cultural contexts and global trends. My love for connecting with people and ideas from around the world reflects my fluency in English, the global language of communication and collaboration. This perspective complements my technical skills, enabling me to navigate interdisciplinary and multicultural environments with ease.

SKILLS

- **Fluent in English, excellent writing and listening. Translation, communication.**
- **Ability to quickly learn new technologies and effectively navigate official documentation for deeper understanding and implementation.**

OBJECTIVES

I am seeking an opportunity or internship where I can apply and enhance my technical knowledge and soft skills, meet the company's needs, and consistently deliver high-quality work, contributing to both my professional growth and the organization's success.
